Since the first Deep Brain Stimulation initiative of Tsinghua University in 2000, PINS Medical has gradually established a multinational corporation with headquarters based in Beijing and international business centers in Singapore. As an innovative high-tech enterprise with a focus on neuromodulation, a variety of clinical products have been developed to date, which include stimulators for deep brain, vagus nerve, spinal cord, and sacral nerve stimulation therapies. PINS Medical devotes itself to providing cutting-edge treatments for patients who suffer from neurological disorders such as Parkinson’s Disease, Epilepsy, Chronic Pain, and OAB, etc.

As part of the “National Engineering Laboratory for Neuromodulation”, PINS Medical works in close cooperation with Tsinghua University and the numerous affiliated clinical centers, becoming a center of attraction for a wide range of professional talents in areas of clinical research, innovative R&D, and business management. Since 2008, PINS Medical has developed rapidly in becoming a leading brand in neuromodulation within the Chinese market, due to the success of its creative research platform that efficiency links basic research, R&D of novel products, clinical testing and market entry.

With an outstanding reputation as a high-tech healthcare corporation, PINS Medical has a primary mission for providing innovative, high-quality products and services for patients to improve quality of life. PINS, which stands for Programmable Implanted Neuromodulation Stimulator, is also an abbreviation of “Patient Is No.1 always”. This clearly presents the goal of PINS Medical for “restoring hope”, not simply as an innovation company but also across society to citizens.

Looking into the future with the continuous rise in incidence of neuropsychiatric disorders and increased social burden across the globe, PINS Medical along with local governments, research centers, companies, and top academic scientists, are now developing and promoting innovative therapies worldwide.
Control vision with software.

Not only THINGS but even the BRAIN and CELLS connect to the Internet. For example, it is no longer a dream for blind people to regain their vision through software control. The NEWVISION project is now on track to make it a reality. Check out our website for details.

SOFTWARE-BASED VISION RESTORATION PROJECT

NEW.VISION

Explore the wildness and immense achievement of the Panama Canal on board the new National Geographic Quest and then venture up the Pacific Coast of Costa Rica. Delight in diverse habitats with monkeys, sloths, toucans, macaws, butterflies, and more, as you explore the beauty of the coast and the national parks. From $5,990 per person twin share.

For a detailed brochure, call (800) 252-4910
All prices are per person twin share + air

Entry-Level Heating Block Starter Kit
Asynt’s DrySyn Classic Starter Kit gives you a great opportunity to experience the outstanding performance of this popular laboratory heating block, which is compatible with the most commonly used round-bottomed flask sizes (50 mL, 100 mL, 250 mL, 500 mL, and 1000 mL). Also included are Asynt heat-resistant handles that enable fast, easy, and safe lifting of your heated reaction flask. Used in combination with a standard hotplate stirrer, DrySyn Classic units are widely proven to outperform the heat-conducting properties of oil baths. They pose a far-lower fire risk and eliminate the messy, time-consuming task of removing residual oil contamination from the outside of your glassware. Their solid anodized aluminum construction delivers outstanding thermal and magnetic transfer efficiency and the durability suitable for use in any laboratory environment. Designed by chemists for chemists, DrySyn Classic units allow unhindered visibility of your reaction.

384-Well Filtration Plates
A range of 384-well filtration plates from Porvair Sciences has a unique drip geometry that provides unmatched sample recovery. By cleverly reshaping the drip director and giving it a compound curve structure, the new filtration plates virtually eliminate the traditional “hanging filtrate” effect, whereby surface tension causes excess filtrate to cling to the outside of the structure. In addition to improving total sample recovery, the new filtration-plate design helps minimize work-surface and sample contamination and improve productivity when used with automated liquid handlers. Available with four different membranes in a useful 140-µL volume, these microplates are made from high-grade polypropylene to minimize extractables. They are available with glass-fiber membranes in three different pore sizes (0.7 µm, 1.2 µm, and 5.0 µm) to enable optimum filtration for a wide range of high biomolecule-binding applications.

Flow Cytometer
The BD LSRSortessa X-20 cell analyzer delivers high-performance, multicolor analysis with the most compact footprint in its class at 30 in. x 29 in. (76.2 cm x 73.7 cm) and a height of just 30 in. (76.2 cm). It can be configured with up to five lasers, enabling detection of up to 20 parameters simultaneously. The most common laser choices are blue, red, violet, yellow-green, and UV. Additional laser choices are available and may be configured at the time of purchase or at a later date to meet evolving application requirements. The unit is supported by a full range of BD Biosciences reagents, including the latest BD Horizon Brilliant Violet polymer conjugates. Based on the BD LSRSortessa analyzer, the BD LSRSortessa X-20 integrates the newest laser and light technologies in a greatly reduced footprint.

Ozone/UV Sterilizer
The CoolCLAVE Plus sterilizer supplies 20x to 25x more sterilization power than its popular predecessor (CoolCLAVE), by using the power of combined UV and ozone cycles plus a new heating function. It is highly effective in sterilizing—or keeping sterile—contaminated pipettes, pipette tips, gloves, plates, and small instruments as well as personal items like keys, glasses, and wallets. To disinfect items, simply place them inside the CoolCLAVE Plus and press the appropriate cycle button. The simultaneous ozone gas and UV light provide a powerful dual-sanitizing effect that can eliminate more than 98% of common pathogenic organisms (bacteria, fungus, virus) in just 30 min. The antimicrobial properties of ozone also eliminate odors produced by some organisms. Best of all, the CoolCLAVE Plus is safe and efficient, uses no harsh chemicals, does not damage any surfaces, and leaves no cleaning-chemical residues.

Plasmid DNA Purification Kits
NucleoBond Xtra Maxi and Maxi Plus are anion-exchange plasmid purification kits based on the patented NucleoBond technology. The typical yields of >1,000 µg of ultrapure plasmid DNA can be obtained in about half of the time needed with other Maxi kits that use anion-exchange chromatography. The entire plasmid purification procedure takes 80 min with NucleoBond Xtra Maxi and 34 min with NucleoBond Xtra Maxi Plus. Specially designed column filters are inserted in the NucleoBond Xtra columns, allowing a convenient, time-saving parallel clarification of bacterial lysate and sample loading onto the column—minimizing the risk of clogging. The enlarged columns lead to lower silica resin beds and enable faster flow of lysate and buffers through the columns. Optimized buffer compositions result in improved alkaline lysis and increased column flow rates. The NucleoBond Finalizer technology replaces the tedious, time-consuming centrifugation step that follows every isopropanol precipitation of diluted DNA samples.

Mycoplasma PCR Detection Kits
e-Myc, e-Myc plus, and e-Myc VALID Mycoplasma PCR Detection Kits greatly simplify testing and detection of mycoplasma contamination in cell cultures. With PCR testing, reliable results are obtained within a few hours, since the presence of contaminant mycoplasmas can be easily and sensitively detected by verifying the amplified DNA fragments after gel electrophoresis. These kits can identify the five most common cell culture-infecting species of mycoplasma, all the way down to 10 colony-forming units (CFU)/mL (e-Myc VALID) and 20 CFU/mL (e-Myc and e-Myc plus). They also contain an internal control (primer set and template DNA) to identify false negatives caused by faulty PCR conditions, as well as 8-methoxypsoralen (8-MOP) to prevent cross-contamination by PCR products from earlier experiments. Each tube contains all the components for PCR (lyophilized) except for templates: DNA polymerase, deoxynucleotides, PCR buffer, primer sets, 8-MOP, and internal control. Just add your templates and perform PCR.

Research
OFFICIAL JOURNAL OF CAST

An Open Access Journal

Research is a comprehensive, interdisciplinary, and selective Open Access journal from the China Association of Science and Technology (CAST), published quarterly and distributed by the American Association for the Advancement of Science (AAAS). Research provides an international platform for academic exchange, research collaboration, and technological advancements. The journal will publish fundamental research in the life and physical sciences as well as important findings or issues in engineering and applied science.

The Science Partner Journals (SPJ) program was established by AAAS, the nonprofit publisher of the Science family of journals. The SPJ program features high-quality, online-only open access publications produced in collaboration with international research institutions, foundations, funders and societies. Through these collaborations, AAAS expands its efforts to communicate science broadly and for the benefit of all people by providing top-tier international research organizations with the technology, visibility and publishing expertise that AAAS is uniquely positioned to offer as the world's largest general science membership society.
Apply for the Science & SciLifeLab Prize for Young Scientists — an annual prize awarded to early-career scientists. The prize is presented in four categories: Cell and Molecular Biology, Genomics and Proteomics, Ecology and Environment, and Translational Medicine.

The winners will have their essays published by Science, win up to USD 30,000 and be invited to a week in Sweden to attend the award ceremony. Get ready for a life-changing moment in your scientific career.
